The future of social care technology: data and technology that works for **everyone**

26th June 2019

Christina Cornwell
Director, Health Lab

@nesta_uk

**Our vision is a people powered and
data driven health and care future**

**We research, fund and support new
technologies, relationships, and
networks that empower people to lead
healthier and more independent lives**

No shortage of innovation - for daily living.....

Voice Assistance

Smart Homes

Smart Devices

Memory aids

nesta Health Lab

Assistive technologies

And supporting care

Robots & cobots

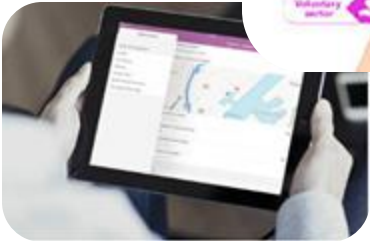

Telehealth & telecare

Information sharing & scheduling tools

Care platforms

But major challenge is adoption and spread

“Systematic transactions are plannable, but warm relationships cannot be so easily reduced to recurring algorithms”

Finding connection in a disconnected age

Stories of community in a time of change

Edited by Alex Smith

June 2019

Looking to the future...

- **Place-based** approaches to investment, research & implementation
- **Staff** training and development
- Integrated models of social *and* tech support, **co-designed** with people
- More sophisticated biometric, voice and activity **sensors**
- **Data** created and used by citizens, who can choose who they share it with - family, informal carers, health and care professionals - and research
